Find the colour of your dream!

You have a **CHOICE**

XRP Cruise

XRP Cruise is a high-end laminate, where the main parts of the material are made from recycled polyester; that is the UV protective film, the taffeta, and the polyester fibers. An eco-friendly choice, at the same price level as comparable laminates! Now is a good time to embark on our journey!

xrp

The combination of black polyester fibers and white taffeta makes up for a greyish look. The XRP cruise comes in 3 qualities where the heaviest is further stabilized with UPE virgin fibers.

The material is used for trioptimal layouts and has proven to be very form stable. The material is soft and easy to handle, and furls easily when used in furling sails.
